

CAT. NO. 1014

MK10

Specially recommended for heavy-duty applications where tough insulation has to be stripped on continuous production basis. The machine is supplied with a set of 'V' blades for stripping all round wires and cables within its capacity range.

With special Die Blades (which are made to order), it can also handle a number of differently shaped cables. With removal of the main rear cylinder it can be converted to a 'cut to length' machine. This conversion is easily achieved in seconds and requires no tooling.

Provided with an adjustable length stop for controlled stripping length.

The MK10 is a robust heavy-duty bench mounted machine Pneumatically operated. The machine is extremely fast in operation, fatigue free, and its precise operation makes it an ideal production machine.

- **Heavy Duty Construction**
- **Pneumatically Operated**
- **Flat and Round Cables**

Technical Specifications:

Stripping:	12mm dia. Max.
Cutting:	3mm dia. solid copper 9.5mm dia. Multi stranded
Operating Pressure:	80psi (6 bar) max.
Weight:	10.5kgs.
